NETWORK FEATURES

Professionally maintained with more than 10 years of active services.

Organizational setup and procedures for maximum customer privacy.

Multi-jurisdictional and multi-company organization with clear separation of access and concerns.

Self-maintained certificate authority (CA), enforced for all client authentication.

Static keys only for authentication, all encryption via ephemeral keys only.

Dual stack network, native IPv4 and IPv6.

Dedicated self-managed DNS resolvers with DNSSEC validation.

Hardened operating systems and configurations: OpenBSD, Hardened Gentoo, Hardened Arch, and hardened buildroot.

Current cryptographic algorithms and key sizes: RSA4096, AES256-CTR/CBC, SHA256/512, ECDH 384.

OpenVPN v2 and IPsec (IKEv2, tunnel mode).

Out-of-Band authentication: Client data is never available to the network routers.

Multi-hop, multi-jurisdiction connections, nodes managed by different companies in different jurisdictions.

IP Pool randomization.

IP address sharing between outgoing connections.

Random IP address assignment for outgoing connections.

No logs whatsoever.
